At the conclusion of the program, attendees leave with a better grasp of every area of the department and are urged to share their experiences with family, friends, and neighbors. **Timeline:** Twice a year

**Realignment of Fire Stations**

The realignment of the fire stations will increase the area of the City that is within 1 ½ miles of a fire station by 8.93 square miles, or 12.5 percent of the community. Timely response increases the odds of saving lives and reducing property loss. For example, a pulseless, breathless patient has a 90 percent chance of survival if the first shock from a defibrillator is delivered within one minute of cardiac arrest. The odds of successful recovery decrease approximately 10 percent for every minute that passes, which highlights the need for strategically located fire stations and medically-trained firefighters. For fires, a room and contents fire can accelerate to a fully-involved structure fire in eight minutes.

Performance metrics – currently we average 5 minutes or less for emergency response for 62 percent of our emergency calls; the goal is to achieve 80 percent or higher with the realignment of fire stations. **Timeline:** Phase 1 began 09/11/13. Completion schedule for 12/13 with completion of Station #3.
