Hello Town of Vernon,

The letter forwarded was the February, 20012 letter the WDNR sent the Town of Vernon in response to their inquiry and questions regarding the fill area. All questions were answered in the letter. Regular groundwater sampling is being conducted and the results are being monitored. No VOC compounds have been detected, as shown in the results sent to you (and sent back in your latest email). As stated earlier, we are working on having a third well sampled (as the fill area expands for an additional data point), in addition to the two monitored currently. Detected levels of arsenic can be contributed to regional background levels (leaching bedrock) and will continue to be monitored. There is no gas monitoring on going. Please state any specific questions.

We are committed to service excellence.
Visit our survey at http://dnr.wi.gov/customersurvey to evaluate how I did.
